

This chart shows the probability of making a straight by the river with various types of starting hands-grouped by how many gaps exist between the two cards.

*No -Gap Connectors (e.g. J/T, 9/8)

*One-Gap (e.g. K/J, Q/10)

*Two-Gaps (e.g. A/J, 8/5)

* Three-Gap (e.g. K/T, 5/2)

Each row list the percent chance and odds of completing a straight, regardless of suits. This is especially useful when evaluating drawing potential pre-flop or planning semi-bluffs on the flop and turn.

 *Note: Suitedness is not considered in this chart — it reflects straight odds only.*
